

Franco Giannotti

+ (54) 911 40886886 | Buenos Aires, Argentina | francogiannotti115@gmail.com

Senior Backend Engineer with 6 years of experience building highly available infrastructure and distributed systems. Expert in designing fault-tolerant architectures, building data-intensive pipelines, and optimizing microservices for global scale and reliability.

Skills

- **Cloud & Infrastructure:** Kubernetes, ArgoCD, Terraform, Docker, AWS, WAF.
- **Databases & Messaging:** MySQL, Redis, DynamoDB, BigQuery, Pub/Sub, SNS/SQS.
- **Architecture & Scale:** Event-Driven Microservices, Distributed Transactions, High-Throughput Pipelines, Domain-Driven Design.
- **Languages:** Go (Golang), Ruby, Python.

Professional Experience

Senior Software Engineer at Cabify

Apr 2022 - Present (~4 yrs)

- Architected an **Automatic Gateway Fallback System** to ensure payment reliability, dynamically rerouting failed transactions during processor outages to prevent revenue loss (saving \$4,500 in its first week).
- Led the **migration of a 3TB financial database** from CouchDB to MySQL, resolving critical availability issues and reducing infrastructure costs by \$7k/month.
- **Redesigned the Fraud Detection Pipeline** (Sift), decoupling risk analysis from the core monolith to process millions of synchronous events for real-time risk scoring.
- **Served as Technical Lead for Cabify Wallet**, a core financial product managing \$3.5M yearly USD in transaction volume; engineered the underlying flows to support new B2B and Loyalty verticals.
- Migrated legacy payment flows to Go microservices, **reducing load on core systems by 170 RPS** and improving API latency by 20% to meet high-availability SLAs.

Software Engineer II at PedidosYa (subsidiary from DeliveryHero)

June 2021 - April 2022 (~1 yr)

- Implemented a B2B wallet top-up and benefit system allowing corporate clients to allocate credits to 21,500 employees, managing complex frequency algorithms for a platform processing 10B EUR in GMV.

Security Software Engineer at MercadoLibre

January 2020 - June 2021 (1 ½ yrs)

- Developed high-concurrency anti-abuse tools in **Go** to detect bot traffic and scrapers, protecting public APIs by processing **1 million logs per hour** with an **80% latency reduction**. ([AWS Case Study](#))

Education

Engineer's degree in Information Systems

Universidad Tecnológica Nacional

2017 - 2024 Buenos Aires (Equivalent to Master of Science in Information Systems Engineering)

GPA: 8.18/10
